

ADITYA GOLLAPUDI

UI/UX DESIGNER · FRONT-END DEVELOPER

Savannah, GA | gollapudi.aditya2@gmail.com | +1 765.694.0397 | adityagollapudi.com | [LinkedIn](#)

SUMMARY

UI/UX designer and front-end developer. I take products from research and design through to a working, shipped front-end. I designed and built Seeker.social, a live nightlife app on iOS, Android, and web with over 10,000 venues. I use AI tools like Figma Make, Codex, and Claude every day to ship faster, and I try to get a working version in front of users early instead of stopping at a deck. I have run projects start to finish, both on my own and as part of a team.

SKILLS

Front-End: React.js, Vue.js, Next.js, JavaScript, HTML, CSS, component-based UI, developer handoff

AI Tools: Figma Make, Codex, Claude / Claude Code

UX & UI: Wireframing, interaction design, information architecture, user flows, prototyping, usability testing, annotated handoff, visual and component design

Research: User interviews, usability tests, surveys, affinity mapping, design thinking (IBM Enterprise Design Thinking), insight translation

Tools: Figma, Adobe Creative Suite, Sketch, Miro, Confluence, Jira, Smartsheet

EXPERIENCE

UX/UI Designer & Front-End Developer, *Part-Time Freelance with SR Consulting* Sep 2024 – Present

Sanathan Sethu, Multi-vendor services platform

- Designing the screens and building the front-end for a platform where temples, priests, caterers, and small businesses can register and list their services in one place, then handing the front-end to the back-end team. Ongoing.

Seeker.social, Nightlife discovery app

- Designed the iOS and Android screens, and designed and built the responsive web front-end for a live app on iOS, Android, and web with **10,000+ venues**.
- Owned the partner admin portal on my own, from the design to the validations to the full flow venues use to manage their listings, pricing, and bookings.

Vaijayanthi Quality Exaal, Logistics marketing site

- Designed and built the marketing site for a logistics company that handles end-to-end logistics for its clients.

UX Designer, *CGI, Bangalore, India* Sep 2022 – Jul 2024

- Redesigned OpenGrid 360 with two interaction models, a map for spatial context and a form for data input. This merged two enterprise user groups into one product without breaking either workflow.
- Worked as the only designer on a product for multiple schools. Shipped one dashboard for attendance, syllabus, and scheduling, and took it from research through to developer handoff.
- Ran two rounds of usability testing with real clients and QA, found the specific points where tasks were failing, redesigned against them, and **cut task completion time by 30%**.

SELECTED PROJECTS

Forkast, QR Allergy Web App (*Solo UX and Front-End*) 2026

- People with food allergies had no reliable way to find safe menu items without asking staff. Built a two-sided QR product: customers filter by their allergies and the menu updates live, while kitchen staff update ingredients and flag items with a PIN. It sits close to a healthcare problem, since getting the allergy information right is a safety issue. Used Figma Make and Codex to build the UI and the allergen-filtering logic quickly.

IQIO, Lifestyle Hearing-Support Wearable (*Industrial Design*) 2026

- Benchmarked 15+ products and collected 120+ data points. Every existing solution worked either clinically or socially, but never both. After 100+ sketches and a second prototype, landed on IQIO, an aluminum ring-frame wearable with an OLED screen, haptic focus mode, a detachable battery, and 6 colorways. No app needed.

EDUCATION & CERTIFICATIONS

MA, Industrial Design, Savannah College of Art and Design (SCAD)

Sep 2024 – Mar 2026

B.Des, Product Design, Ramaiah University of Applied Sciences, Bangalore (CGPA 7.83/10)

Aug 2018 – Jul 2022

Design Research and Insight Translation, Lextant (Sep 2025)
